

PROGRESS DEMO INSTRUCTIONS

As we continue to progress through our Scrum meetings and work on our project, it's important to remember that the demo is a crucial part of the process. Think of it as presenting your prototype to a customer or stakeholder. Therefore, it is crucial to be well-prepared and capable of explaining your product and its features without any guidance. The demo schedule can be found [here](#). Furthermore, all the demos will be carried out in an online manner at the following Zoom link:

<https://sabanciuniv.zoom.us/j/6237177697?pwd=eW54Q1JRYy9vRFBMayt3VGtOcDA5dz09>

Note that you will have only 10 minutes for your presentation. Consequently, it is in your best interest to use the time wisely. To this end, follow the guidelines below:

- Connect to the Zoom link above 10 minutes before your scheduled demo time.
- Before your scheduled time, make sure that everything required by your demo, such as servers and services, is up and running.
- When the floor is yours, first describe what type of e-commerce site you have developed in one sentence and then start running the scenario given below without any further due.
- Do not prepare presentation slides (or any other documents) for the demo.

The scenario to be executed:

Step 1 (Feature 1 and 9): From the main/home page, show the different product categories you have, and the properties a product has (such as ID, name, model, ...).

Step 2 (Feature 3 - 50 points): Select three products and present them along with their stock status:

1. Product A: out of stock (thus, "add to shopping cart" button should be disabled)
2. Product B: only one product in stock.
3. Product C: more than one product in stock.

Step 3 (Feature 7 - 100 points): Add items to the shopping cart:

1. The user is not logged in to the system.
2. Sort products depending on their price.
3. Sort products depending on their popularity.
4. Search for Product A by name and show that it cannot be added to the shopping cart.
5. Search for Product B by name and add it to the shopping cart.
6. Search for Product C by description and add it to the shopping cart.

Step 4 (Feature 4 - 100 points): Buy the items in the shopping cart:

1. Go to the shopping cart and confirm the added items.
2. The system should ask the user to log in to complete the purchase.
3. Sign up as a new user
4. Login as a user
5. Make and confirm payment.
6. Show that after payment, an invoice is displayed on the screen
7. Show that a PDF copy of the invoice is emailed to the user.

Step 5 (Feature 3 - 50 points): After the shopping is done:

1. The purchase status should be "processing."
2. The products should be decreased from the stock.
3. The order for delivery processing should be forwarded to the delivery department.
4. Present the change of the delivery status from "processing" to "in-transit" and then to "delivered."

Step 6 (Feature 5 - 100 points): After delivering the products:

1. Give a rating to Product B, which should be immediately added.
2. Write a comment about Product B, which should not appear immediately
3. Write a comment about Product C, which should not appear immediately.
4. Approve the comment on Product C and decline the comment on Product B.
5. Show the comments on both Products B and C from the main/home page.
